Press Release #1 - Label Launch - 07/2008

Who are we?

Speaker Blower Records is, above all, a state of mind and an artistic expression. We are a new tendencies, forward thinking, innovative drum 'n' bass platform from Portugal. Our gold is to release future classics and our policy is total artistic freedom.

Everything started from the need of covering a hole: the lack of a drum 'n' bass label in Portugal despite of good talents in music production. In July 2007, Dr. Speaker Blower started contacts with the best portuguese djs/producers of this kind of music. From these contacts and the will of everybody involved, the label Speaker Blower Records was born.

The producers/djs that start the label are from the whole country and clearly show the quality of the d 'n' b that is made in Portugal. All artists have a sound with personal characteristics but there is a convergence to an advanced, deep, futuristic, funky and cinematic sound - the Speaker Blower Records sound.

We have among us: **C-Netik** (a young prodigy from Almada, considered by many as the best portuguese d 'n' b producer and has already released tracks by several labels in different countries), **Synapse** (a talent from Viana do Castelo, comes from the Trance world where he has achieved success with internacional releases and is one of the best electronic music producers in Portugal), **Skippy** (a young producer from Oporto that has evolved a lot his techniques and is causing a lot of forum talk with his sound), **NoLeaf** (producer/dj from Lisbon, specialist in mash-ups with other genres of music in his sets), **Nuno Forte** (from Oporto, one of the first d 'n' b djs in Portugal, winner of the Danceclub award for best d 'n' b dj (4 times in a row) and is considered by many as the best d 'n' b dj in this country) and, the label boss, **Dr. Speaker Blower** (from Oporto, one of the first d 'n' b producers in Portugal, started the first d 'n' b band in Portugal - Sonic Tribe Indians, creator of the first virtual synthesizer "Made in Portugal" - Lusur (vst - pc) and, actually, he plays exclusively in Live Act. And we just added the best DnB Mc in Portugal: **Mc Tresh**.

After some months spent in the conception and preparation, the label Speaker Blower Records officialy starts on the 5th of July 2008 with its website www.sbrecs.net.

Where are we?

We are based on Oporto, the capital of drum 'n' bass in Portugal but we are 100% turned on to the global world: we start as a netlabel but we want to grow slowly but surely and also release on vinyl, cd and video. This way we target the whole world from the start in a simple, fast and universal way.

We have 2 online stores: one is internal and is on our own website. In this store there are available all our free and paid releases. Payments are made safely through Paypal. This way we do not receive any customer information except its email that is added to our mailinglist and will be only used for future contacts (in our newsletter service with the latest news and free downloadable special offers). The other store is external (is not in our server) and is from an online labels service. In this second store, payments are made by credit card (any) in a safe way and here, there are only the paid releases. This store also has a newsletter service but due to the system used by the external service, there are only the latest news and additions - there are no free special offers here.

What releases have we?

As stated before, our sound is futuristic, forward thinking, advanced, deep, innovative, dark, funky, sometimes extreme but always melodic, cinematic and musical.

In our website (www.sbrecs.net/promo.htm) there is a free downloadable promotional release (SBR#000) in both wav/mp3 formats. This is clearly a demonstration of the quality of our artists and sound and is accessible universally online. They are some of the best tracks by our artists! It includes PDF Artwork for easy and fast printing.

As first release, we have the album "Dark Side Has No Gravity" by Dr. Speaker Blower. It marks the sound of our label. with 15 tracks in total and almost 1H30m of duration, this work includes colaborations with the other 6 SBR label artists. With tracks with different flavours, this album has many innovative tunes and is, surely, one of the albums of the year in Portugal. Tunes as "Probe" (with NoLeaf), "Movement", "Evil Force", "Out of Range", among others, are going to make many people sweat on the dancefloors worldwide. After a year on its conception and production, the album, finally is released on June 2008. From this album several dubplates on vinyl have been cut and given to selected internacional and portuguese djs in order to spread our sound on clubs worldwide.

We also release, on the opening day of the label, the first works in the Speaker Blower Records by talented producers C-Netik and Synapse. The first release in the label by C-Netik is the single "Strangelet", with tunes that are absolutely killers: "Animal" and "Strangelet". With his personal sound style evolved, C-Netik is delivering a huge attack on the mind of the listeners with these tunes.

By Synapse, the release of his single "Memories" promises to shake a lot of dancefloors. With "Memories", a track that is already a classic in Portugal, one of top voted tunes in the dnppt.com website and one of the most commented in the Cows of Patrol Forum, some of the online meeting points of the portuguese junglists. Also featuring "Subdrone" with its powerful rythm and with those hypnotic sounds, so characteristic of this artist. As a start, we have only top quality releases and we want to keep the level high!

All our products in our stores are on sale in mp3 format @ 320 kbs (we use only the best codec: LAME) and wav (in store 1 only). It deserves a special mention the fact that all our products are on sale without ANY kind of copy protection (DRM or others). We are absolutely against any kind of restriction on the use and abuse of our sound as we are against any kind of piracy. However, we strongly believe that is not with stupid proteccions (that would only affect the customers) that we are going to solve this issue. Our solution is very simple: the prices of our products are very attractive, beeing among the lowest on the market. Not the quality of our sound though.
